Movel SR-rich-related protein Clasp specifically interacts with inactivated Clk4 and induces the exon EB inclusion of Clk.";
J. Biol. Chem. 277-44220-44228 (2002).

-1- FUNCTION: Phosphorylates serine- and arginine-rich (SR) proteins of the spliceosomal complex may be a constituent of a network of regulatory mechanisms that enable SR proteins to control RNA

splicing. Phosphorylates serines, threonines and tyrosines.
Required for the regulation of alternative splicing of MAPT/TAU.
CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.
CATALYTIC ACTIVITY: ATP + a protein tyrosine = ADP + protein

tyrosine phosphate.
SUBUNIT: Interacts with UBLS (By similarity).
SUBCELLUIAR LOCATION: Nuclear (By similarity).
ALTERNATIVE PRODUCTS: Event=Alternative splicing; Named isoforms=2;

Isold=035493-1; Sequence=Displayed;

IBold=035493-2; Sequence=VSP 008205; TISSUE SPECIFICITY: Expressed In the hippocampus, the cerebellum

and the olfactorx bulb. PTM: Autophosphorylates on all three types of residues. SIMILARITY: Belongs to the Ser/Thr protein kinase family. Lammer

subfamily.

tyrosine phosphate.

Event=Alternative splicing; Named isoforms=2;

IsoId=035493-1; Sequence=Displayed;

IBOId=035493-2; Sequence=VSP 008205;
TISSUE SPECIFICITY: Expressed In the hippocampus, the cerebellum

PTM: Autophosphorylates on all three types of residues. SIMILARITY: Belongs to the Ser/Thr protein kinase family. Lammer

and the olfactorx bulb.

        Sequence 2, Application US/10801671

Publication No. US20040152123A1

GENERAL INFORMATION:

APPLICANT: YAN, Chunhua et al.

TITLE OF INVENTION: ISCLATED HUMAN KINASE PROTEINS, NUCLEIC

TITLE OF INVENTION: ACID MOLECULES ENCODING HUMAN KINASE PROTEINS, AND USES

TITLE OF INVENTION: US/10/801,671

CURRENT PELING DATE: 2004-03-17

FILE REFERENCE: CLO00758DIV-III

CURRENT APPLICATION NUMBER: 06/227,470

PRIOR APPLICATION NUMBER: 09/810,671

PRIOR PILING DATE: 2000-08-24

PRIOR PILING DATE: 2001-03-19

NUMBER OF SEQ ID NOS: SOFTWARE: PARKEN FARENCE PARKENCE PARKENCE

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

I inactivated Clk4 and induces the exon EB inclusion of Clk.";
J. Biol. Chem. 277:44220-44228 (2002).

-1- FUNCTION: Phosphorylates serine- and arginine-rich (SR) proteins of the splicesomal complex may be a constituent of a network of regulatory mechanisms that enable SR proteins to control RNA splicing. Phosphorylates serines, threonines and tyrosines.

C Required for the regulation of alternative splicing of MAPT/TAU.

-1- CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.

C -1- CATALYTIC ACTIVITY: ATP + a protein tyrosine = ADP + protein

C -1- SUBGUILT: Interactes with UBL5 (By similarity).

Dual specificity protein kinase CLK1 (EC 2.7.1.37) (EC 2.7.1.112) (CDC like kinase LN shanase CLK1; Synonyma=CLK; Homo sapiens (Human).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              IsoId=P49759-2; Sequence=VSP_004852, VSP_004853;
Note=Lacks the kinase domain. May be produced at very low levels due to a premature stop codon in the mRNA, leading to nonsense-mediated mRNA decay;
                                                                                                                                                                                                                                                                                                                                                                                                      Johnson K.W., Smith K.A.; "Molecular cloning of a novel human cdc2/CDC28-like protein kinase."; J. Biol. Chem. 266:3402-3407(1991).

Hillman R.T., Green R.E., Brenner S.E.;

"An unappreciated role for RNA surveillance.";

Genome Biol. 5:RESEARCH081.-RESEARCH081.6(2004).

-!- FUNCTION: Phosphorylates serine- and arginine-rich (SR) proteins of the spliceosomal complex may be a constituent of a network of regulatory mechanisms that enable SR proteins to control RNA splicing. Phosphorylates serines, threonines and tyrosines (By shillsty).

-!- CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.

-!- CATALYTIC ACTIVITY: ATP + a protein tyrosine = ADP + protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SEQUENCE FROM N.A.

1801d=2518-2; Sequence=VSP_004854, VSP_004855;
Note=Lacks the kinase domain;
PTM: Autophosphorylates on all three types of residues.
SIMILARITY: Belongs to the Ser/Thr protein kinase family. Lammer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    regulates their intranuclear distribution.";

EMBO J. 15:265-275(1996).

-!- FUNCTION: Phosphorylates serine- and arginine-rich (SR) proteins of the spliceosonal complex may be a constituent of a network of regulatory mechanisms that enable SR proteins to control RNA splicing. Phosphorylates serines, threonines and tyrosines.
-!- CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.
-!- CATALYTIC ACTIVITY: ATP + a protein tyrosine = ADP + protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SEQUENCE FROM N.A. Han unappreciated role for RNA surveillance.";
Genome Biol. 5:RESEARCH008.1-RESEARCH008.16(2004).
-!-FUNCTION: Phosphorylates serine and arguinne-rich (SR) proteins of the spliceosomal complex may be a constituent of a network of regulatory mechanisms that enable SR proteins to control RNA splicing. Phosphorylates serines, threonines and tyrosines (By similarity).
-!-CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.
-!-CATALYTIC ACTIVITY: ATP + a protein tyrosine = ADP + protein
                                                                                                                                                                                                                                      Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          106 DEEGHLICQSGDVLRARYEIVDTLGEGAFGKVVECIDHGMDGMHVAVKIVKNVGRYREAA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        similarity).
-!- CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.
-!- CATALYTIC ACTIVITY: ATP + a protein tyrosine = ADP + protein tyrosine phosphate.
-!- SUBCELLULAR LOCATION: Nuclear (By similarity).
-!- PTM: Autophosphorylates on all three types of residues.
-!- SIMILARITY: Belongs to the Ser/Thr protein kinase family. Lammer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        43 PPRRSRSRSHDRIP-----YQRRYREHRDSDTYR---CEERSPSFGEDCYGSSRSR

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    엄상
                                                                                                                                                                                                                                                                                                                                                                                                                                               Direct Submission.

Submitted (02-JUJ-2003) Biological Chemistry and Molecular Pharmacology, Harvard Institute of Proteomics, 320 Charles St., Cambridge, MA 02141-2023, USA

This CDS clone is a part of a collection of human full-length expression clones generated by Harvard Institute of Proteomics. Bach CDS has been cloned by Harvard Institute of Proteomics. Cterminal tag). The CDS has been directionally cloned using BD In-Fusion(TM) cloning system between the Sall and HindIII sites of the PDNR-Dual vector. Additional sequences in the clone: 'ACC' safter Sall site and before 'ATG' to provide Kozak consensus sequence; 'GG' after last codon and before HindIII site to maintain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                PHOGRESOCHYLEAGELNERDYRDRYNDEYRNDYCEGYVPRHYHRDIESGYRIHCS
